

Silente

High End Liquid Audio Amplifier

TECHNOLOGICAL EXCELLENCE EXCLUSIVITY INNOVATION

For many years we have researched into the world of music reproduction to try to make it more and more credible and evocative. In fact we are all aware that those vibrations that try to reproduce the original event and bring us back to the ineffable charm of live are, unfortunately and always, slightly distorting mirrors...

Now our research and attention have focused on the music reproduction of those circuits that are obligatorily responsible to amplify the input signal.

Little by little we have understood that these circuits must not disturb everything that passes through them, we have understood that any interference would have affected the authenticity of our musical signal.

So we created SILENTE: an amplifier where all the electronic equipment must absolutely remain indifferent to the passage of very delicate musical signals; an amplifier that must not disturb the harmonic envelope of our beloved music played!

It was a difficult task that we tried to achieve with the most sophisticated modern techniques.

Peculiarities Silente Amplifier

All the components of this new project are contained in a glass cylinder from MURANO (VENICE) immersed in a stabilizing fluid to limit the electrical and thermal variations of each component to minimize the thermal drift effect and dampen micro vibrations. The internal wiring is connected with rigid copper-silver wire and terminated with military connectors. In addition the massive watertight aluminum frame reduces any small oscillation.

Features

Output Power: 2 x 120W @ 8 ohm -

2 x 240W @ 4 ohm

Chassis: aircraft aluminum - Murano glass

Dimensions: 380 x 450 x 180 mm

Weight 35 kg

Available other powers only on order

The 'ASEC' are dedicated cables, developed by the Audiomica Laboratory company for the 'Silente' amplifier. The set includes interconnect, power cord and speaker cables. Structurally, the cables have been adapted to the MIL-C-5015 military spec connectors. The proprietary Audiomica plugs are also used.

All products carrying the 'ASEC' signature are created exclusively for the innovative "Silente" amplifier and are the only officially recommended cables to use with this device.
